

Rest Easy And Save Money!

AST Preventive Maintenance Program

Our professionals come to your facility on a regular schedule to inspect and refurbish stainless steel equipment as it is cycled in and out of service.

You know how expensive downtime can be for your operation – and so does Allegheny Surface Technology. That's why we created the AST Preventive Maintenance Program to keep your stainless steel process equipment in peak condition and reduce the chance of costly emergency shut-downs.

Our Certified Weld Inspectors with years of experience provide fully documented Level II Visual Inspections, including:

- Ultrasound testing
- Liquid Penetrant testing
- Profilometer measurement of surface finish
- Borescope testing and videotaping

If the inspection reveals any problems, our specialists perform fully documented or certified,

on-site refurbishment services including:

- Certified ASME Code weld repair
- Stainless steel equipment modifications
- Complete mechanical polishing
- Chemical cleaning, electropolishing and passivation
- Component replacement

In addition, if you have an emergency at any time, you'll receive preferred treatment as an AST Preventive Maintenance Program client from our "Rapid Response" refurbishment team to resolve your problem, fast.

With AST on the job 24/7, you'll know your equipment and your profits are protected – even while you sleep!
